\$25 fee for live event

and on-demand access to recording

Neuroscience-lite with relationship-based
interventions anyone can use.

This session is for the parent, volunteer, or non-clinical professional to help them understand the impact of high stress and trauma on the brain and body. The ACEs study helped us to understand the life-long impact of stress and trauma on the brain and body ...but it didn't tell the whole story. We will look how stress and trauma comes out in behavior and, most importantly, how healthy, consistent relationships with caring adults and community support is the key to healing.
